---

Kelly;

Based on the following information, and the marginal usefulness of "flash static" water levels in this area north of the Verdugo Fault, I recommended to the field team that we not measure water levels from these two wells. Let me know if you would like to discuss further.

Regards,

John

Andy, after speaking to Vulcan supervisor, they use both wells all the time. They can turn off the wells and use city water service. What do we want to do? Gauge both wells? Let me know. Thanks, Mike

**Subject:** NHOU- Request to Gauge Groundwater Level at Sun Valley Gravel Pit

Kelly-

Yesterday, I received a call from Mike Ledeau (spelling?) from CH2M Hill, who asked permission to gauge groundwater levels at 2 wells at the Sun Valley Gravel Pit on the EPA's behalf. CalMat dba Vulcan Materials will cooperate with this EPA request and grant access to two production wells for well gauging

purposes. However, since these wells are in-use, we will need at least 24-hours notice to shut them down. Also, we would be unable to pull the pumps out so the wells must be sounded with the pumps in-situ. Thanks.
